https://github.com/nicolauria

I've been working in the tech industry for the past five years. Spending time with developers sparked my interest in coding and I began to teach myself web development. I quickly developed a passion for coding and decided to pursue software development as a new career. After attending one of the top programming boot camps in San Francisco I am now in the process of finding a job. My skills include React, Redux and Rails among other technologies.

Skills

- Ruby
- JavaScript
- SQL

- Ruby on Rails
- HTML/CSS
- React.js

- JavaScript
- JQuery
- Git

Projects

Campfire https://campfire-chat.herokuapp.com

Campfire is a messaging application based off the popular chat app Slack. The app utilizes Rails action cable for web sockets and React Redux on the frontend.

Space Ninja https://nicolauria.github.io/space-ninja

Space Ninja is a computer game based off the popular arcade game Fruit Ninja. The game was built using Javascript and the P5 library.
